About Us

Our Mission

To help you optimise your seeding program.

Our Product Design Objectives

- Accurate seed and fertiliser placement.
- Optimum crop establishment.
- Durability.
- Ease of use.
- Increased value for money.

Our Product Range

We manufacture and supply aftermarket parts for air seeders, including replacement points, seed boots, press wheels, coulters, bushes and other spare parts.

We also consult, design, engineer and fabricate custom parts and prototypes for ground engaging tools and other wear parts for all air seeder makes and models.

Our constant investment in research and development, and talking with and listening to farmers has resulted in an expanded product range, covering more seeding bar brands and more parts.

Here at Maxipoint our aim is not just to sell you a product, but to help you solve problems, design better parts for your seeding program and provide you with the best support we can.

Our Resources

Maxipoint has a wide range of different resources available for our customers. We have a fast and efficient website that has all the information you need to order. This includes online ordering, instruction manuals, and the ability to search for your nearest dealer and contact them directly. You can also always find Maxipoint at the following field days;

Henty, Newdegate, Dowerin and Wagin. Field days are a great opportunity for us to communicate directly with farmers, so if you have any questions please don't hesitate to see us.

Our Support

Maxipoint is a proud sponsor of the Eastern District Football League and we have continued interest in supporting regional towns and farming communities.

Proudly manufacturing products in
Australia for over 25 years.

Slot Mate System

1 ADAPTOR 20+ POINTS

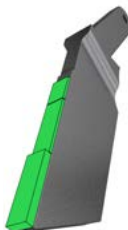

Upgrades

Hardfacing	Liquid Tube Holder – Nut	Liquid Tube Holder – Block	Side Plates
			
PT-UPH \$23	PT-UPN \$4	PT-UPB \$22	PT-UPS \$28
			
Adds life by improving side and back wear, particularly in abrasive soils or wet seeding.	Simple nut welded to hold 6mm liquid tube. Other sizes available on request.	More secure holder than the nut, suit 6mm tube.	For double shoot set ups, deflects soil away from the fertiliser drop zone.

Add Ons

Trash Guard	Lynch Pin	HD Lynch Pin
		
PT-2002 \$33	FA-0802 \$2	FA-0803 \$3

Tungsten Options

12mm	15mm	SLL
		
The common 12mm wide point for lowest soil throw and easiest pulling.	15mm wide tungsten for extra wear life.	The Super Long Life with extra thick 'spear angled' tungsten and hardfacing on the side.

7 Seed Placement Options

Single Row Narrow Closer Plates (20mm & 30mm Closer Plate):
For heavy soil types.

Single Row 50mm Closer Plate:
Most common for Australia seeding conditions.

Paired Row 40mm: 40mm spacing will give a wider seeding row.

Paired Row 70mm: 70mm Spacing will give 2 distinct rows.

Side Banded: Seed placement on shoulder of furrow.

Single Row Flexible Backshoot: For low breakout bars, or as conditions dictate.

Please note the tyne frame part numbers SB-0231 and DB-0220 are for Tyne Frames to suit C-Shank cultivator tynes.

If you have an edge on tyne, or any tyne other than a C-Shank, you must indicate your shank type on your order.

We make tyne frames to suit the following tynes: Horwood Curved, Horwood Straight, Gason, Simplicity, Flexicoil Edge-On, John Shearer and more.

These tyne frames are also supplied with a special U-bolt to suit. If unsure we welcome you to call or email us to clarify any details.

Keep Your Tubes Clear

Airguard Blockage Prevention systems are quick and easy to install with any air drill to deliver optimum results.

- **Seed in wet and dry conditions**
Work in humid conditions without plugging issues.
- **Reduce humidity**
Significantly decrease the moisture in your air drill to reduce plugging issues.
- **Low oil temperature**
Keep your oil cool and hydraulic system running efficiently.
- **Use dusty fertilisers**
Eliminate the hassle of plugging problems with powdery fertilisers.

With Airguard

Without Airguard

Brackets

Dual Snorkel Kit

Seed Brakes

Features

- Minimise seed damage. The seed brake uses a spiral system to slow seed flow: there are no baffles for the seeds to hit against
- Lower cost AIRGUARD. Seed Brakes are competitively priced making it an affordable investment
- Deliver durability. The UV protected plastic withstands harsh weather conditions
- Reduce seed waste. Controlled airflow eliminates seed bounce and seed soil mixing
- Improve yield. With optimum seed and fertiliser placement
- Prevent plugging. Modify airflow to match your specific type of opener.

Benefits

AIRGUARD Seed Brakes are designed to help you achieve consistent optimum air flow across every opener on your air drill to achieve perfect seed and fertiliser placement. Controlled by a series of washers at the exhaust port, the adjustable air speed allows you to match your specific type of opener and achieve more efficiency with no seed bounce.

Blockage Monitors

Features

- Economical flow and row blockage detection
- A modular concept allows easy system customization
- Monitors up to 128 rows and 8 hoppers
- - 8 sensor modules scanning capability
- - 16-row display capability per sensor module or 15 rows and 1 hopper level sensor
- Vigilense Seed flow sensor for detection of various seed sizes including rapeseeds
- Implement lift switch input
- Display with 16-row indicators
- Adjustable alarm
- Five step LED dimming for full sunlight/nighttime use
- Internal audible alarm (chirp/blare output)

Benefits

PRECISION MONITORING

Equipped with 16-row indicators per module and a seven-segment display, the ASMII alerts you if your seeding rate falls below a programmable seeds per second threshold. You can customise the minimum seeds per second alarm point for 1 - 150 seeds per 2 seconds. The system monitors blockage for up to 128 rows or 120 rows and 8 hopper-level sensors.

CUSTOMISABLE FOR YOUR EQUIPMENT

Thanks to a modular design, the ASM II can reduce harnessing and wiring costs, requiring fewer wires and splitters running to the tractor hitch. Customise the ASM II to fit your needs by adding up to eight modules.

STATE-OF-THE-ART TECHNOLOGY

The ASM II is designed with advanced RS485 communication models that can receive input from 16 seed flow sensors (or 15 sensors and one hopper level sensor). Added features on the ASM II include an internal audible alarm, five-step LED dimming for day or night use, and alarm recognition override.

Vigilense Blockage Sensor

FEATURES

- DETECTS THE SMALLEST CANOLA SEED TO THE LARGEST FERTILISER GRANULE
- DETECTS PREDETERMINED BLOCKAGE PERCENT LEVEL, NOT JUST "FLOWING" OR "BLOCKED"
